

**Listing of the Claims:**

The following Listing of the Claims will replace all prior versions and all prior listings of the claims in the present application:

- 
1. (Original; Allowed) A method of determining the presence or absence of a target microbe in a liquid water sample, said method consisting of the steps of:
    - a) combining a liquid water sample and a powdered medium having at least one nutrient indicator, said nutrient indicator being selected from the group consisting of: orthonitrophenyl-B-D-glucuronide; B-naphthalamide-B-D-glucuronide;  $\alpha$ -naphthol-B-D-glucuronide; and methylumbelliferyl-B-D-glucuronide, to form a mixture;
    - b) incubating the mixture for a time sufficient to produce a detectable color signal indicative of the presence or absence of a target microbe;
    - c) observing the signal to determine the presence or absence of said target microbe in said sample.
  2. (Original; Allowed) The method of claim 1 wherein said detectable color signal is a visible color signal.
  3. (Original; Allowed) The method of claim 1 wherein said detectable color signal is a fluorescent color signal.
  4. (Original; Allowed) The method of claim 1 wherein said medium lacks a gelling agent.
  5. (Original; Allowed) The method of claim 1 wherein said powdered medium is free of target microbes.
  6. (New) A method of determining the presence or absence of a target microbe in a liquid water sample, said method consisting of the steps of:
    - a) combining a liquid water sample and a powder having at least one nutrient indicator, said nutrient indicator being selected from the group consisting of: orthonitrophenyl-B-D-

glucuronide; B-napthalamide-B-D-glucuronide;  $\alpha$ -naphthol-B-D-glucuronide; and methylumbelliferyl-B-D-glucuronide, to form a mixture;

b) incubating the mixture for a time sufficient to produce a detectable color signal indicative of the presence or absence of a target microbe;

c) observing the signal to determine the presence or absence of said target microbe in said sample.

7. (New) A method of determining the presence or absence of a target microbe in a liquid water sample, said method comprising the following steps, in order:

a) combining a liquid water sample and a powder having at least one nutrient indicator, said nutrient indicator being selected from the group consisting of: orthonitrophenyl-B-D-glucuronide; B-napthalamide-B-D-glucuronide;  $\alpha$ -naphthol-B-D-glucuronide; and methylumbelliferyl-B-D-glucuronide, to form a mixture;

b) incubating the mixture for a time sufficient to produce a detectable color signal indicative of the presence or absence of a target microbe without the need of performing a preliminary target microbe growth step;

c) observing the signal to determine the presence or absence of said target microbe in said sample.
